

## TRW Sinter Road & Track (SRT) Brake Pads with General Certification (ABE)

- **The next generation of premium brake pads**
- **Precise sensitivity, stable pressure points, extremely resistant to thermal loads**
- **Maximum safety due to NRS™ technology**

**Sinter Road & Track (SRT) premium brake pads by TRW are superior to conventional brake pads in several aspects. Even under the most challenging conditions, they ensure safe and precise braking. Compared to conventional sintered metal pads, they also exhibit considerably longer durability and more precise sensitivity under high loads.**

TRW Sinter Road & Track (SRT) brake pads convince even very ambitious motorcyclists with their stable pressure point, consistent and fade-free braking power even under high thermal loads, low manual force and perfect sensitivity.

These premium pads of course have General Certification (ABE) and can be combined with the original brake discs as well as with all TRW discs. For fast touring and heavy custom vehicles, the low-noise brake pads are just as much the first choice as they are for amateur laps on the race track.

Even under the most extreme thermal loads, such as those that occur when driving downhill or sporty driving, loss of friction material is excluded thanks to patented NRS™ technology. The Sinter Road & Track (SRT) brake pad's back plates are equipped with a special hook profile that permanently embeds itself into the friction material. State-of-the-art manufacturing methods are used in the production of Sinter Road & Track (SRT) premium brake pads. In a direct hot pressing process, the sintered metal pad mixture is applied to the back plate by means of a conductive sintering process. The result is an excellent and

standardised pad structure. This ensures that the pads maintain a constant coefficient of friction until the defined remaining pad thickness has been reached.

Maximum safety, durability and precise performance, even under the most extreme conditions – to ensure that these requirements are optimally fulfilled, the Sinter Road & Track (SRT) brake pads by TRW contain every ounce of the brake experts' know-how. – For further information please visit [www.trwmoto.com](http://www.trwmoto.com).

**ZF Friedrichshafen AG**

ZF is a global leader in driveline and chassis technology as well as active and passive safety systems. The company has a global workforce of 146,000 with approximately 230 locations in some 40 countries. In 2018, ZF achieved sales of €36.9 billion. ZF is one of the largest automotive suppliers worldwide.

ZF allows vehicles to see, think and act. The company invests more than six percent of its sales in research and development annually – in particular for the development of efficient and electric drivelines and also in striving for a world without accidents. With

its broad portfolio, ZF is advancing mobility and services in the automobile, truck and industrial technology sectors.

With integrated solutions and the entire ZF product portfolio, the ZF Aftermarket Division of ZF Friedrichshafen AG guarantees the performance and efficiency of vehicles throughout their life cycle. Its combination of established product brands, digital innovations, customized products and services and a worldwide service network has made ZF a sought-after partner and number two in the global automotive aftermarket.

ZF Aftermarket boasts a broad product portfolio of spare parts and accessories for motorcycles, scooters, trikes and quads under the TRW product brand. TRW products meet the international automotive industry's extremely high quality standards. They guarantee the utmost safety and best possible performance, excelling through their unique quality and appealing design.
